I. INTRODUCTION

A. RISK FACTORS

■ Standard Risk Factors

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on the various factors and forces affecting the capital markets and money markets.
- Past performance of the Sponsors and their affiliates / AMC / Mutual Fund does not guarantee future performance of the Scheme(s) of the Mutual Fund.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The Sponsors are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs.1 lakh each made by them towards setting up the Fund.
- The present Scheme is not a guaranteed or assured return scheme.

■ Scheme Specific Risk Factors

Some of the specific risk factors related to the Scheme include, but are not limited to the following:

Risk factors associated with investing in Fixed Income Securities

- Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading

to delays in receipt of proceeds from sale of securities. The NAV of the respective Plan(s) under the Scheme can go up or down because of various factors that affect the capital markets in general.

- The NAV of the respective Plan(s) will be affected by changes in the general level of interest rates. The NAV of the respective Plan(s) is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- Money market securities, while fairly liquid, lack a well developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.
- Investment in Debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.
- Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. The price-risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system.
- Different types of fixed income securities in which the Scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the Scheme risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA rated.
- The AMC may, considering the overall level of risk of the portfolio, invest in lower rated / unrated securities offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute level of risk of the portfolio.
- As zero coupon securities do not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio.
- While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges and may lead to the Scheme incurring losses till the security is finally sold.
- Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. The AMC may choose to invest in unlisted securities that offer attractive yields. This may increase the risk of the portfolio.

- At times, due to the forces and factors affecting the capital market, the Scheme may not be able to invest in securities falling within its investment objective resulting in holding the monies collected by it in cash or cash equivalent or invest the same in other permissible securities amounting to substantial reduction in the earning capability of the Scheme.

Risk factors associated with investing in Foreign Debt Securities

• Currency Risk

Moving from Indian Rupee (INR) to any other currency entails currency risk. To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian Rupee.

• Interest Rate Risk

The pace and movement of interest rate cycles of various countries, though loosely co-related, can differ significantly. Hence by investing in securities of countries other than India, the Scheme stand exposed to their interest rate cycles.

• Credit Risk

This is substantially reduced since the SEBI (MF) Regulations stipulate investments only in debt instruments with rating not below investment grade by accredited/registered credit rating agency.

To manage risks associated with foreign currency and interest rate exposure, the Mutual Fund may use derivatives for efficient portfolio management including hedging and in accordance with conditions as may be stipulated by SEBI / RBI from time to time.

Risk factors associated with investing in Derivatives

- The AMC, on behalf of the respective Plan(s), may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and enhance Unit holders' interest. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Other risks include, the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
- The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Risk factors associated with investing in Securitised Debt

The Risks involved in Securitised Papers described below are the principal ones and does not represent that the statement of risks set out hereunder is exhaustive.

- **Limited Liquidity & Price Risk**

There is no assurance that a deep secondary market will develop for the Certificates. This could limit the ability of the investor to resell them.

- **Limited Recourse, Delinquency and Credit Risk**

The Credit Enhancement stipulated represents a limited loss cover to the Investors. These Certificates represent an undivided beneficial interest in the underlying receivables and do not represent an obligation of either the Issuer or the Seller or the originator, or the parent or any affiliate of the Seller, Issuer and Originator. No financial recourse is available to the Certificate Holders against the Investors' Representative. Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Investor Payouts to the Certificate Holders may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of an Obligor to repay his obligation, the Servicer may repossess and sell the Asset. However many factors may affect, delay or prevent the repossession of such Asset or the length of time required to realise the sale proceeds on such sales. In addition, the price at which such Asset may be sold may be lower than the amount due from that Obligor.

- **Risks due to possible prepayments and Charge Offs**

In the event of prepayments, investors may be exposed to changes in tenor and yield. Also, any Charge Offs would result in the reduction in the tenor of the Pass Through Certificates (PTCs).

- **Bankruptcy of the Swap Bank**

If the Swap Bank, becomes subject to bankruptcy proceedings then an Investor could experience losses or delays in the payments due under the Interest Rate Swap Agreement.

- **Risk of Co-mingling**

With respect to the Certificates, the Servicer will deposit all payments received from the Obligors into the Collection Account. However, there could be a time gap between collection by a Servicer and depositing the same into the Collection account especially considering that some of the collections may be in the form of cash. In this interim period, collections from the Loan Agreements may not be segregated from other funds of originator. If originator in its capacity as Servicer fails to remit such funds due to Investors, the Investors may be exposed to a potential loss.

Risk factors associated with Securities Lending

As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary.

Risk Factors associated with Market Trading

- Although Units of the respective Plan(s) as mentioned in this Scheme Information Document are to be listed on the Exchange, there can be no assurance that an active secondary market will develop or be maintained.

- Trading in Units of the respective Plan(s) on the Exchange may be halted because of market conditions or for reasons that in view of Exchange Authorities or SEBI, trading in Units of the respective Plan(s) is not advisable. In addition, trading in Units of the Scheme is subject to trading halts caused by extraordinary market volatility and pursuant to Exchange and SEBI 'circuit filter' rules. There can be no assurance that the requirements of Exchange necessary to maintain the listing of Units of the respective Plan(s) will continue to be met or will remain unchanged.
- Any changes in trading regulations by the Stock Exchange(s) or SEBI may inter-alia result in wider premium/ discount to NAV.
- The Units of the respective Plan(s) may trade above or below their NAV. The NAV of the respective Plan(s) will fluctuate with changes in the market value of Plan's holdings. The trading prices of Units of the respective Plan(s) will fluctuate in accordance with changes in their NAV as well as market supply and demand for the Units of the respective Plan(s).
- The Units will be issued in demat form through depositories. The records of the depository are final with respect to the number of Units available to the credit of Unit holder. Settlement of trades, repurchase of Units by the Mutual Fund on the maturity date / final redemption date will depend upon the confirmations to be received from depository(ies) on which the Mutual Fund has no control.
- The market price of the Units of the respective Plan(s), like any other listed security, is largely dependent on two factors, viz., (1) the intrinsic value of the Unit (or NAV), and (2) demand and supply of Units in the market. Sizeable demand or supply of the Units in the Exchange may lead to market price of the Units to quote at premium or discount to NAV.
- As the Units allotted under respective Plan(s) of the Scheme will be listed on the Exchange, the Mutual Fund shall not provide for redemption / repurchase of Units prior to maturity / final redemption date of the respective Plan(s).

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The individual Plan(s) under the Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Plan(s). These conditions will be complied with immediately after the close of the NFO itself i.e. at the time of allotment. In case of non-fulfillment with the condition of minimum 20 investors, the Plan(s) shall be wound up in accordance with Regulation 39 (2) (c) of SEBI (MF) Regulations automatically without any reference from SEBI. In case of non-fulfillment with the condition of 25% holding by a single investor on the date of allotment, the application to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the corpus collected. Consequently, such exposure over 25% limits will lead to refund within 6 weeks of the date of closure of the New Fund Offer.

From time to time, the respective Plan(s) may hold cash. A part of the net assets may be invested in the Collateralised Borrowing & Lending Obligations (CBLO) or repo or in an alternative investment as may be provided by RBI to meet the liquidity requirements.

The respective Plan(s) may take derivatives position (fixed income) based on the opportunities available subject to the guidelines issued by SEBI from time to time and in line with the investment objective of the Scheme. The maximum derivative position will be restricted to 20% of the Net Assets of the respective Plan(s).

The respective Plan(s) may seek investment opportunity in the Foreign Debt Securities, in accordance with guidelines stipulated in this regard by SEBI and RBI from time to time. 1. Not more than 25% of the net assets of the respective Plan(s) under the Scheme can generally be deployed in Stock Lending.
2. Not more than 5% of the net assets of the respective Plan(s) under the Scheme can generally be deployed in Stock Lending to any single counter party.

The Scheme may not be able to sell such lent out securities and this can lead to temporary illiquidity.

Pending deployment of funds of the respective Plan(s) in securities in terms of the investment objective, the AMC may park the funds of the respective Plan(s) in short term deposits of scheduled commercial banks, subject to the guidelines issued by SEBI vide its circular dated April 16, 2007, as amended from time to time.

Change in Asset Allocation Pattern

Subject to SEBI (MF) Regulations, the asset allocation pattern indicated above may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. It must be clearly understood that the percentages stated above are only indicative and not absolute. These proportions may vary substantially depending upon the perception of the AMC, the intention being at all times to seek to protect the interests of the Unit holders. Such changes in the investment pattern will be for short term and only for defensive considerations.

In the event of the asset allocation falling outside the limits specified in the asset allocation table, the Fund Manager will endeavour to review and rebalance the same within 90 days.

Activity in the Primary and Secondary Market is dominated by Central Government Securities including Treasury Bills. These instruments comprise close to 50% of all outstanding debt and close to 75% of the daily trading volume on the Wholesale Debt Market Segment of the National Stock Exchange of India Limited.

In the money market, activity levels of the Government and Non-Government Debt vary from time to time. Instruments that comprise a major portion of money market activity include,

- Overnight Call
- Collateralised Borrowing & Lending Obligations (CBLO)
- Treasury Bills
- Government Securities with a residual maturity of < 1 year
- Commercial Paper
- Certificates of Deposit

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. Though not strictly classified as Money Market Instruments, PSU / DFI / Corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option.

The following table gives approximate yields prevailing during the month of November 2009 on some of the instruments. These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro economic conditions and RBI policy.

Instrument	Yield Range (% per annum)
Inter bank Call Money	3.25 – 3.40
91 Day Treasury Bill	3.17 – 3.38
364 Day Treasury Bill	4.29 – 4.53
P1+Commercial Paper 90 Days	3.70 – 4.75

3 Year Corporate Bond – AAA Rated	7.33 – 7.82
5 Year Corporate Bond – AAA Rated	7.92 – 8.41

Generally, for instruments issued by a non-Government entity (corporate / PSU bonds), the yield is higher than the yield on a Government Security with corresponding maturity. The difference, known as credit spread, depends on the credit rating of the entity.

Overseas Debt Market

The nature and number of debt instruments available in international debt markets is very wide. In terms of diverse instruments as well as liquidity, overseas debt markets offer great depth and are extremely well developed.

Investment in international debt greatly expands the universe of top quality debt, which is no longer restricted to the limited papers available in the domestic debt market. The higher rated overseas sovereign, quasi-government and corporate debt offer lower default risk in addition to offering a high degree of liquidity since these are traded across major international markets. Investments in rated international debt offer multiple benefits of risk reduction, a much wider universe of top quality debt and also potential gains from currency movements.

Investments in international markets are most often in U.S. dollars, though the Euro, Pound Sterling and the Yen are also

major currencies. Though this market is geographically well-spread across global financial centres, the markets in the U.S., European Union and London offer the most liquidity and depth of instruments.

Besides factors specific to the country / issuer, international bond prices are influenced to a large extent by a number of other factors; chief among these are the international economic outlook, changes in interest rates in major economies, trading volumes in overseas markets, cross currency movements among major currencies, rating changes of countries / corporations and major political changes globally.

The approximate yields to maturity in the US Bond Market are as follows:

Maturity	US Treasury yields (%) (As at November 30, 2009)
3 months	0.06
6 months	0.15
2 years	0.67
3 years	1.12
5 years	2.01
10 years	3.21

The maximum debt derivative position will be restricted to 20% of the Net Assets of the respective Plan(s).

RBI has issued guidelines on Interest Rate Swaps (IRS) and Forward Rate Agreements (FRA) on July 7, 1999. These products were introduced for deepening the country's money market. SEBI has also permitted trading of interest rate derivatives through Stock Exchanges. The respective Plan(s) under the Scheme may trade in these instruments.

Interest Rate Swaps (IRS)

All swaps are financial contracts, which involve exchange (swap) of a set of payments owned by one party for another set of payments owned by another party, usually through an intermediary (market maker). An IRS can be defined as a contract between two parties (Counter Parties) to exchange, on particular dates in the future, one series of cash flows, (fixed interest) for another series of cashflows (variable or floating interest) in the same currency and on the same principal for an agreed period of time. The exchange of cashflows need not occur on the same date.

Forward Rate Agreement (FRA)

A FRA is an agreement between two counter parties to pay or to receive the difference between an agreed fixed rate (the FRA rate) and the interest rate prevailing on a stipulated future date, based on a notional amount, for an agreed period. In short, in a FRA, interest rate is fixed now for a future period. The special feature of FRAs is that the only payment is the difference between the FRA rate and the Reference rate and hence are single settlement contracts. As in the case of IRS, notional amounts are not exchanged.

E. WHAT ARE THE INVESTMENT STRATEGIES? INVESTMENT STRATEGY AND RISK CONTROL

The net assets of the Plan(s) under the Scheme will be invested in Debt, Money market instruments and Government Securities maturing on or before the maturity date of the respective Plan(s). The primary objective of the Plan(s) under the Scheme is to generate income through investments in Debt / Money Market Instruments and Government Securities maturing on or before the maturity date of the respective Plan(s).

Investors can subscribe (purchase) / redeem (sell) Units on a continuous basis on the National Stock Exchange of India Ltd. on which the Units are listed during the trading hours like any other publicly traded stock. In view of the nature of the Scheme, there will likely be no turnover in the portfolio (except for change in composition of portfolio of securities made as per the prevailing market conditions) of the Plan(s).

Though every endeavor will be made to achieve the objectives of the Scheme, the AMC/Sponsors/ Trustees do not guarantee that the investment objectives of the Scheme

will be achieved. No guaranteed returns are being offered under the Scheme.

RISK CONTROL

Investments made from the corpus of the Plan(s) would be in accordance with the investment objective of the Scheme and the provisions of the SEBI (MF) Regulations. The AMC will strive to achieve the investment objective by way of a judicious portfolio mix comprising of debt, money market instruments and government securities. Every investment opportunity would be assessed with regard to credit risk, interest rate risk and liquidity risk.

Credit Risk

A detailed credit evaluation of each investment opportunity will be undertaken. The AMC will utilise ratings of recognised rating agencies as an input in the decision making process. Investments in bonds and debentures will usually be in instruments that have been assigned high investment grade ratings by a recognized rating agency. In line with SEBI Circular No. MFD/CIR/9/120/2000 dated November 24, 2000, the AMC may constitute committee(s) to approve proposals for investments in unrated instruments. The AMC Board and the Trustee shall approve the detailed parameters for such investments. The details of such investments would be communicated by the AMC to the Trustee in their periodical reports. It would also be clearly mentioned in the reports, how the parameters have been complied with. However, in case any security does not fall under the parameters, the prior approval of Board of AMC and Trustee shall be sought.

Interest Rate Risk

An interest rate scenario analysis would be performed on an on-going basis, considering the impact of the developments on the macro-economic front and the demand and supply of funds. Based on the above analysis, the AMC would manage the investments of the Scheme on a dynamic basis to exploit emerging opportunities in the investment universe and manage risks at all points in time.

Liquidity Risk

The AMC will provide liquidity by maintaining a low average duration of the portfolio and by investing in securities that would result in a staggered maturity profile of the portfolio. Liquidity will also be managed by investing in the Collateralised Borrowing & Lending Obligations (CBLO) / repo market when CBLO money / repo yields are attractive relative to other money market yields. Investment in debt instruments would generally be in securities that have reasonable secondary market activity.

Due to the short duration of the portfolio and the low risk product profile, the effect of volatility in debt markets on the portfolio will be limited. This permits investors to enhance their yields without compromising on the quality of the portfolio.

In the event of a requirement to liquidate all or a substantial part of these investments in a very short duration of time, the AMC may not be able to realize the full value of these securities leading to an adverse impact on the Net Assets of the Plan(s) under the Scheme. Please refer to "**Suspension of Sale / Redemption of the Units**", in section "**Restrictions, if any, on the right to freely retain or dispose of units being offered**" on **Page 27**.

Strategies for investment in Derivatives

Some of the strategies involving derivatives that may be used by the Investment Manager, with a aim to protect capital and enhance returns include :

Basic Structure of a Swap

Assume that the Scheme has a Rs. 20 crore floating rate investment linked to MIBOR (Mumbai Inter Bank Offered Rate). Hence, the Scheme is currently running an interest rate risk and

stands to lose if the interest rate moves down. To hedge this interest rate risk, the Scheme can enter into a 6 month MIBOR swap. Through this swap, the Scheme will receive a fixed predetermined rate (assume 12%) and pays the "benchmark rate" (MIBOR), which is fixed by the National Stock Exchange of India limited (NSE) or any other agency such as Reuters. This swap would effectively lock-in the rate or 12% for the next 6 months, eliminating the daily interest rate risk. This usually routed through an intermediary who runs a book and matches deals between various counterparties.

The steps will be as follows -

- Assuming the swap is for Rs. 20 crore June 1, 2008 to December 1, 2008. The Scheme is a fixed rate receiver at 12% and the counterparty is a floating rate receiver at the overnight rate on a compounded basis (say NSE MIBOR).
- On June 1, 2008 the Scheme and the counterparty will exchange only a contract of having entered this swap. This documentation would be as per International Swap Dealers Association (ISDA).
- On a daily basis, the benchmark rate fixed by NSE will be tracked by them.
- On December 1, 2008 they will calculate the following-
 - The Scheme is entitled to receive interest on Rs. 20 crore at 12% for 184 days i.e. Rs. 1.21 crore, (this amount is known at the time the swap was concluded) and will pay the compounded benchmark rate.
 - The counterparty is entitled to receive daily compounded call rate for 184 days & pay 12% fixed.
 - On December 1, 2008, if the total interest on the daily overnight compounded benchmark rate is higher than Rs. 1.21 crore, the Scheme will pay the difference to the counterparty. If the daily compounded benchmark rate is lower, then the counterparty will pay the Scheme the difference.
 - Effectively the Scheme earns interest at the rate of 12% p.a. for six months without lending money for 6 months fixed, while the counterparty pays interest @ 12% p.a. for 6 months on Rs. 20 crore, without borrowing for 6 months fixed.

The above example illustrates the benefits and risks of using derivatives for hedging and optimizing the investment portfolio. Swaps have their own drawbacks like credit risk, settlement risk. However, these risks are substantially reduced as the amount involved is interest streams and not principal.

Risk Factors

- **Credit Risk:** This is the risk of defaults by the counterparty. This is usually negligible, as there is no exchange of principal amounts in a derivative transaction.
- **Market Risk:** Market movements may adversely affect the pricing and settlement derivatives.
- **Liquidity Risk:** The risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.

Forward Rate Agreement

Assume that on April 30, 2009, the 30 day commercial paper (CP) rate is 5.75% and the Scheme has an investment in a CP of face value Rs. 25 crores, which is going to mature on May 30, 2009. If the interest rates are likely to remain stable or decline after May 30, 2009, and if the fund manager, who wants to re-deploy the maturity proceeds for 1 more month, does not want to take the risk of interest rates going down, he

can then enter into a following forward rate agreement (FRA) say as on April 30, 2009:

He can receive 1 X 2 FRA on April 30, 2009 at 5.75% (FRA rate for 1 months lending in 2 months time) on the notional amount of Rs. 25 crores, with a reference rate of 30 day CP benchmark. If the CP benchmark on the settlement date i.e. May 30, 2009 falls to 5.50%, then the Scheme receives the difference 5.75 - 5.50 i.e. 25 basis points on the notional amount Rs. 25 crores for 1 month. The maturity proceeds are then reinvested at say 5.50% (close to the benchmark). The scheme, however, would have locked in the rate prevailing on April 30, 2009 (5.75%) as it would have received 25 basis points more as settlement amount from FRA. Thus the fund manager can use FRA to mitigate the reinvestment risk.

In this example, if the rates move up by 25 basis points to 6% on the settlement date (May 30, 2009), the Scheme loses 25 basis points but since the reinvestment will then happen at 6%, effective returns for the Scheme is unchanged at 5.75%, which is the prevailing rate on May 30, 2009.

PORTFOLIO TURNOVER

Investors can subscribe (purchase) / redeem (sell) Units on a continuous basis on the National Stock Exchange of India Ltd. on which the Units are listed during the trading hours like any other publicly traded stock. In view of the nature of the Scheme, there will likely be no turnover in the portfolio (except for change in composition of portfolio of securities made as per the prevailing market conditions) of the Plan(s).

The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

NAV of Units under each Plan shall be calculated as shown below:

$$\text{NAV (Rs.) per Unit} = \frac{\text{Market or Fair Value of the Plan's Investments} + \text{Current Assets} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under each Plan}}$$

The AMC will calculate and disclose the first NAV of the Plan(s) not later than 30 days from the closure of New Fund Offer Period of the respective Plan(s). Subsequently, the NAV of the Plan(s) will be calculated and disclosed at the close of every Business Day.

Each Plan(s) will be managed as a separate investment Portfolio. Separate NAV will be calculated and announced for each of the Options (viz. Growth and Dividend) of the respective Plan(s) at the close of every Business Day. The NAVs will be calculated upto 4 decimals. Units will be allotted in whole figure.

There are no specific SEBI guidelines on valuation of foreign

securities at present. In the absence of any guidelines, the following policy will be followed:

In case of investment in foreign debt securities, on the Valuation Day, the securities shall be valued in line with the valuation norms specified by SEBI for Indian debt securities. However, in case valuation for a specific debt security is not covered by SEBI (MF) Regulations, then the security will be valued on fair value basis.

Due to difference in time zones of different markets, closing price of overseas securities may be available only after the prescribed time limit for declaration of NAV in India. In such cases, the NAV of the respective Plan(s) for any Business Day (T day) will be available on the next Business Day (T+1 day) and the same shall be posted, on each Business Day, on the Fund's website and on the AMFI website - www.amfiindia.com on date of computation of NAV.

On the Valuation Day, all assets and liabilities denominated in foreign currency will be valued in Indian Rupees at the exchange rate available on Bloomberg / Reuters / RBI at the close of banking hours in India. The Trustee reserves the right to change the source for determining the exchange rate.

The exchange gain / loss resulting from the aforesaid conversion shall be recognized as unrealized exchange gain / loss in the books of the Scheme on the day of valuation.
